# NETWORKS IN TRINETX

WHAT ARE THE NETWORKS?

Each network option represents either Stony Brook University data, data from a collection of other institutions, which also includes Stony Brook data, or data that includes insurance claims data. Here is what you need to know. Here are few of the available networks:

Network Name	Comprises	Number of patients	Dataset download?
US Collaborative	68+ health care institutions' data from the US	118.5M	No
Global Collaborative	134+ health care institutions' data, including data from US, Europe, Middle East, Latin America, and Africa	157.1M	No
Linked Claims	24+ HCOs Claims data, including SBM	16.1M	Yes, via TNX
Research	97+ health care institutions' data from EMRs	134M	Yes, via TNX
Stony Brook University	Stony Brook data from our EMR	1.76M	Yes, via SB

HOW DO I CHOOSE A NETWORK?

Good news! You can create your study, and change networks easy-peasy, then even change them back. You can also have multiple queries within your study, and assign a different network to each one. Change the data network by clicking on the pull-down arrow in the network section of your study's Query Builder, which will display your available options.

Choose a network that allows downloads if you will want to have a dataset for further analyis. Naturally, choose the Stony Brook network if you are specifically interested in our patients.

Click on a network to select it.

Global Collaborative Network | 157,058,412 Patients		Connect	Analytics	Data sets
● **134 of 134 Online** | Last Update: 3 hours ago				
LATAM Collaborative Network | 31,937,200 Patients		Connect	Analytics	Data sets
● **32 of 32 Online** | Last Update: 3 hours ago				
Linked | 16,096,575 Patients		Connect	Analytics	Data sets
● **24 of 24 Online**				
Research | 134,030,767 Patients		Connect	Analytics	Data sets
● **97 of 97 Online** | Last Update: 3 hours ago				
Stony Brook University | 1,763,820 Patients		Connect	Analytics	Data sets
● **1 of 1 Online** | Last Update: 6 days ago				
US Collaborative Network | 118,468,576 Patients		Connect	Analytics	Data sets
● **68 of 68 Online** | Last Update: 10 hours ago				

Note: Each network displays which of the following features are available:

Trial Connect   Analytics   Data sets

- <u>Trial Connect</u> allows pharma to ask our Office of Clinical Trials to match their study with one of our PIs

- <u>Analytics</u> is a set of powerful analysis tools that you can use within the platform to look at your data.

- <u>Data sets</u> indicates that a de-identified dataset can be retrieved from the chosen network for your own analysis
